CHAPTER 1. OVERVIEW

1.1. Project information

IdeaTrack is a web-based Initiative Management System developed using ASP.NET Core MVC (.NET 8), PostgreSQL, and Entity Framework Core. The system is designed to digitalize and standardize the workflow of academic initiatives in a university environment, where proposals must pass through several controlled review stages before final approval. By centralizing initiative submission, review, scoring, and decision-making, IdeaTrack helps reduce manual handling, improve traceability, and enhance the consistency of the approval process.

From a functional perspective, the system supports a complex state transition workflow that reflects real-world academic governance. An initiative may move through multiple statuses such as draft creation, submission, faculty-level review, scientific committee evaluation, final processing, and final approval or rejection. Because each transition depends on both the current state and the user role, the system requires strict authorization control and logical validation to ensure that only qualified users can perform permitted actions at the correct stage.

Within the scope of this testing project, five main modules are included: Authentication, Author, Faculty Leader, Councils, and SciTech Admin. These modules together form the core business flow of the application. In addition, IdeaTrack is not only a conventional website but also integrates internal API mechanisms to support secure and efficient state management across its layered workflow. Therefore, the testing focus is placed on validating role-based access control, UI behavior, business rules, and the correctness of state transitions throughout the initiative lifecycle.

1.2. Project team

No.	Full Name	Role & Task Allocation
1	Nguyễn Ngọc Triệu	Team Leader – responsible for Test Plan coordination, report integration, progress tracking, and final quality review. Also executes 10 manual test cases and participates in testing the Authentication module.
2	Phạm Quang Vũ	QA Automation & Module Tester – responsible for designing and executing 10 manual test cases, developing Selenium-based automation scripts for bonus points, and

		testing the Author module.
3	Nguyễn Hoàng Phúc	Bug Manager & Module Tester – responsible for managing JIRA bug tracking, classifying Severity/Priority, executing 10 manual test cases, and testing the Faculty Leader module.
4	Nguyễn Tấn Thiện Huy	System Architect & Module Tester – responsible for analyzing state transition logic, preparing workflow diagrams, executing 10 manual test cases, and testing the Councils and SciTech Admin modules.

Table Error: Reference source not found-1 Team members and roles

All four team members contribute equally to manual testing, defect reporting, and documentation. Each member is assigned one primary functional area while still sharing responsibility for overall test design, execution, and report writing to ensure balanced workload distribution and comprehensive coverage of the system scope.

CHAPTER 2. TEST PLAN

2.1. Test scope

2.1.1. *In-scope*

The system testing phase is structured around specialized functional modules to ensure comprehensive validation of all business processes. The primary focus of the testing scope encompasses the following core areas:

System Administration and Security Testing begins with a rigorous verification of the Authentication Module and Role-Based Access Control (RBAC). This ensures secure user login and logout processes while validating that access and state transitions are strictly governed by assigned roles and business rules. Concurrently, the SciTech Admin Module is evaluated to confirm the system's foundational stability, focusing on period and academic year management, template configuration, user administration, and the proper handling of final-stage initiative processing.

Initiative Processing and Evaluation Workflows The core user operations are systematically validated starting with the Author Module, which covers initiative creation, draft saving, file attachments, co-author management, and tracking functions. The review and evaluation stages are then tested through the Faculty Leader Module, ensuring correct role-restricted decision-making for approvals and rejections at the faculty level. Following this, the Councils Module undergoes testing for council assignments, score submissions, re-evaluation requests, and final score consolidation to guarantee a transparent and accurate assessment workflow.

State Transition and Lifecycle Management A critical area of focus during testing is the State Transition Workflow of Initiatives. The testing team traces the complete initiative lifecycle, tracking its progression from *Draft* through intermediate states (*Pending*, *Faculty_Approved*, *Evaluating*, *Pending_Final*, *Processing*) to the final outcomes (*Approved* or *Rejected*). To ensure system resilience and flexibility, the testing scope also comprehensively covers rollback and recovery mechanisms, thoroughly validating the *Clone*, *Revoke*, and *Resubmit* operational flows.

2.1.2. *Out-of-scope*

Due to time constraints and the academic scope of the project, the following activities are excluded from testing:

- Performance testing / Stress testing

- Advanced security penetration testing
- Mobile responsiveness testing on mobile devices

2.2. Test strategy & approach

The test strategy for IdeaTrack is designed according to a black-box testing-oriented approach, supported by selective white-box review and limited automation for high-value scenarios. Since the system is primarily a workflow-driven academic platform, the main testing objective is to verify that business rules, role permissions, and state transitions operate correctly under both normal and negative conditions.

2.2.1. *Black-box testing*

The team applies Equivalence Partitioning (EP) and Boundary Value Analysis (BVA) to form-based inputs in critical modules. For example, the initiative creation form is tested with valid and invalid input groups such as empty fields, maximum-length values, and malformed data. Similarly, the council scoring form, which uses a 100-point scale, is tested at boundary conditions such as minimum score, maximum score, and values around critical limits. This approach helps detect input validation defects efficiently while minimizing redundant test cases.

In addition, the project applies State Transition Testing as a core design technique because IdeaTrack is fundamentally a workflow-based system. Each initiative moves through a controlled sequence of statuses, and every transition depends on both the current state and the active user role. Therefore, the team verifies not only the normal progression of states, such as Pending → Evaluating → Processing, but also alternate and exceptional flows, including rollback, re-evaluation, resubmission, and revocation. This method is essential for detecting logical defects in the transition rules, such as unauthorized state changes, skipped stages, incorrect rejection handling, or inconsistent recovery behavior after a decision is reversed.

2.2.2. *White-box testing*

Although the project is primarily black-box in nature, the team also performs limited white-box review to improve understanding of system implementation before execution. Specifically, the team reviews key Controller files and the DataSeederService.cs source code in the ASP.NET Core project to understand how data is initialized, how entities are linked, and how the application enforces workflow rules at the code level. This review

helps the testers interpret UI behavior correctly, verify seeded test data, and prepare more accurate test conditions for each module.

2.2.3. *Manual and automation*

The testing process combines manual and automated testing.

Manual Testing: The team executes manual test cases to cover the principal business flows across the five core modules. Manual testing is used for role-specific actions, workflow transitions, validation errors, UI behavior, and negative test scenarios. All defects discovered during manual execution are logged in JIRA with strict Severity and Priority classification to support defect triage and follow-up tracking.

Automation Testing: To enhance repeatability, the team uses Selenium WebDriver and C# (xUnit) to automate selected happy-path scenarios such as login and initiative creation. These automated scripts help validate stable workflows and generate an HTML test report for result documentation.

2.3. Test environment

Item	Specification
Operating System	Windows 10/11, macOS
Browsers	Google Chrome (Latest), Microsoft Edge (Latest)
Application Environment	Kestrel Web Server (.NET 8), localhost:5227
Database	PostgreSQL
Test Management & Bug Tracking	JIRA
Automation Tools	xUnit, Selenium WebDriver

Table Error: Reference source not found-1 Environment details

The above environment was selected to ensure consistency with the development stack of IdeaTrack and to provide stable conditions for both manual execution and automation-based verification.

CHAPTER 3. Test Design & Execution

3.1. Test scenarios

Scenario ID	Module	Scenario Description	Priority
SC-01	Homepage Features	Verification of general landing page elements, public announcements, system guidelines, and basic navigation before login.	Medium
SC-02	Author Module	Validation of initiative creation, draft saving, file attachment upload, co-author management, and submission tracking.	High
SC-03	Faculty Leader Module	Testing of initiative review at the faculty level, including approval, rejection, and role-restricted decision-making.	High
SC-04	SciTech Admin Module	Verification of period/academic year management, template configuration, user administration, and final-stage initiative processing.	Critical
SC-05	Council Member Module	Validation of council assignment viewing, score submission, evaluation workflow, and re-evaluation processing.	High
SC-06	Initiative State Flow	End-to-end testing of the full initiative lifecycle (Draft to Approved/Rejected), including rollback flows (Clone, Revoke, Resubmit).	Critical

Table Error: Reference source not found-1 Test scenarios details

3.2. Test case specification

The team has designed and executed more than 40 detailed test cases covering both UI and API-level behaviors. The following tables present the standard test case structure and several representative samples. The complete set of test cases is attached in Excel format in the Appendix section.

3.2.1. Author Module

The screenshot shows the 'Create Initiative' page in the 'Initiative Portal'. The page has a red header with the portal name and user controls. A sidebar on the left lists navigation options: Home, Leaderboard, About, Recognized Initiatives, Guidelines, and a 'Register Initiative' button. The main content area is titled 'Create Initiative' and contains a form with the following fields:

- Academic Year ***: A dropdown menu showing 'Academic Year 2025-2026'.
- Category ***: A dropdown menu with the placeholder '-- Select academic year first --'.
- Department**: A text input field containing 'Department of Information Technology'.
- Budget (VND)**: A text input field containing '0'.
- Initiative Title ***: A text input field with the placeholder 'Enter a brief title for the initiative'.
- Co-Authors (Optional)**: A field for adding co-authors.

Picture Error: Reference source not found-1 Function author create initiative

ID	Title	Pre-conditions	Steps	Expected / Actual Results	Status
AU-CI-01	Create Initiative — Valid Data (EP: valid partition)	User is logged in as Author. Academic Year and Category exist.	1. Navigate to Register Initiative. 2. Fill: Title = "AI Solution", AcademicYearId = 1, CategoryId = 2, File = "tailieu.pdf", CoAuthorIds = [2, 3]. 3. Click Submit.	System saves the initiative successfully and redirects to My Initiatives page.	PASS
AU-CI-02	Create Initiative — Blank Title (EP: invalid — empty string)	User is logged in as Author.	1. Navigate to Register Initiative. 2. Leave Title blank, fill other fields. 3. Click Submit.	Validation error: "The Title field is required." Initiative is not saved.	PASS
AU-CI-03	Create Initiative — Missing Academic Year (EP: invalid — null selection)	User is logged in as Author.	1. Navigate to Register Initiative. 2. Fill Title, do NOT select Academic Year. 3. Click Submit.	Submit button is disabled or server rejects with validation error "Please select an Academic Year."	PASS
AU-CI-04	Create Initiative — Invalid File Type (EP: invalid file extension)	User is logged in as Author.	1. Navigate to Register Initiative. 2. Fill valid data, attach File = "script.exe". 3. Click Submit.	Validation error: "Invalid file format, only (.pdf, .docx, ...) allowed." File is rejected.	PASS

AU-CI-05	Create Initiative — File Size Exceeded (BVA: above max limit)	User is logged in as Author. Max file size = 10 MB.	1. Navigate to Register Initiative. 2. Fill valid data, attach File = "video.mp4" (50 MB). 3. Click Submit.	Validation error: "File size exceeds the allowed limit (10 MB)." Submission blocked.	PASS
AU-CI-06	Create Initiative — File Size at Boundary (BVA: exactly 10 MB)	User is logged in as Author. Max file size = 10 MB.	1. Navigate to Register Initiative. 2. Fill valid data, attach a file exactly 10 MB. 3. Click Submit.	File is accepted and initiative is created successfully.	PASS
AU-CI-07	Create Initiative — File Size Just Below Limit (BVA: 9.99 MB)	User is logged in as Author. Max file size = 10 MB.	1. Navigate to Register Initiative. 2. Fill valid data, attach a file of 9.99 MB. 3. Click Submit.	File is accepted and initiative is created successfully.	PASS
AU-CI-08	Create Initiative — File Size Just Above Limit (BVA: 10.01 MB)	User is logged in as Author. Max file size = 10 MB.	1. Navigate to Register Initiative. 2. Fill valid data, attach a file of 10.01 MB. 3. Click Submit.	Validation error: "File size exceeds the allowed limit (10 MB)."	PASS
AU-CI-09	Create Initiative — Title at Min Length (BVA: 1 character)	User is logged in as Author.	1. Navigate to Register Initiative. 2. Enter Title = "A". 3. Fill other required fields. 4. Click Submit.	Initiative is created successfully with single-character title.	PASS
AU-CI-10	Create Initiative — Title at Max Length (BVA: max allowed chars)	User is logged in as Author.	1. Navigate to Register Initiative. 2. Enter Title with maximum allowed characters (e.g., 255 chars). 3. Fill other fields. 4. Click Submit.	Initiative is created successfully. Title is stored and displayed correctly.	PASS
AU-CI-11	Create Initiative — Title Exceeds Max Length (BVA: max + 1)	User is logged in as Author.	1. Navigate to Register Initiative. 2. Enter Title with max + 1 characters. 3. Click Submit.	Validation error or title is truncated. Initiative is not saved with oversized title.	PASS
AU-	Create Initiative	User is logged in	1. Navigate to Register	Initiative is created	PASS

CI-12	— No File Attached (EP: optional file = empty)	as Author. File is optional.	Initiative. 2. Fill Title, Academic Year, Category. Do NOT attach file. 3. Click Submit.	successfully without attachment.	
AU-CI-13	Create Initiative — Missing Category (EP: invalid — null)	User is logged in as Author.	1. Navigate to Register Initiative. 2. Fill Title, select Academic Year. Do NOT select Category. 3. Click Submit.	Validation error: "Category is required."	PASS
AU-CI-14	Create Initiative — Budget = 0 (BVA: lower bound)	User is logged in as Author.	1. Navigate to Register Initiative. 2. Fill all required fields, set Budget = 0. 3. Click Submit.	Initiative is created with Budget = 0.	PASS
AU-CI-15	Create Initiative — Negative Budget (EP: invalid numeric)	User is logged in as Author.	1. Navigate to Register Initiative. 2. Fill all fields, set Budget = -1000. 3. Click Submit.	Validation error: "Budget must be a non-negative number."	PASS

3.2.2. Faculty module

Picture Error: Reference source not found-5 Function faculty review initiative

ID	Title	Pre-conditions	Steps	Expected / Actual Results	Status
FA-RV-01	Review — Accept Initiative (EP: valid accept action)	Faculty user logged in. Initiative status = Submitted. Initiative exists (e.g., SK2025-002).	1. Navigate to Initiative List. 2. Open initiative detail. 3. Enter comment: "Good initiative." 4. Click "Accept".	Status changes to Faculty_Approved. System notification: "Initiative accepted..."	PASS
FA-RV-02	Review — Request Revision with Comment (EP: valid revision request)	Faculty user logged in. Initiative status = Submitted.	1. Open initiative detail. 2. Enter comment: "Please add more data." 3. Click "Request Revision".	Status changes to Revision_Required. System records revision request and notifies author.	PASS
FA-RV-03	Review — Request Revision with Blank Comment (BVA: empty comment boundary)	Faculty user logged in. Initiative status = Submitted.	1. Open initiative detail. 2. Leave comment field blank. 3. Click "Request Revision".	If comment is required: validation error. If optional: revision request is submitted.	PASS
FA-RV-04	Review — Reject Initiative (EP: valid reject)	Faculty user logged in. Initiative status =	1. Open initiative detail. 2. Enter comment:	Status changes to Rejected. System notification: "Initiative has been rejected."	PASS

FA-DS-01	Search Initiatives by Keyword (EP: valid keyword)	Faculty user logged in. Initiatives exist.	1. Navigate to Dashboard. 2. Enter search string "AI Solution" in search bar. 3. Click Search / Apply.	List displays only initiatives matching "AI Solution."	PASS
FA-DS-02	Filter by Academic Year / Period (EP: valid filter)	Faculty user logged in. Multiple years/periods exist.	1. Navigate to Dashboard. 2. Select Year = "2025-2026", Period = "2025-2026". 3. Click Apply / Filter.	Initiative list and statistics charts update to show only data for the selected year/period.	PASS
FA-DS-03	Export Dashboard to Excel (EP: valid export)	Faculty user logged in. Initiative data exists.	1. Navigate to Dashboard. 2. Click "Export" button.	Browser downloads CSV file "Initiative_Stats_ddMMyyyy.csv" with correct faculty data.	PASS
FA-DS-04	View File as PDF (EP: valid file conversion)	Faculty user logged in. Initiative has attachment "tailieu.docx".	1. Navigate to initiative detail. 2. Click "View File" on attached document.	System converts docx to PDF via LibreOffice and opens in browser PDF viewer.	PASS
FA-DS-05	Search with Empty Keyword (BVA: empty string)	Faculty user logged in.	1. Navigate to Dashboard. 2. Leave search bar empty. 3. Click Search.	All initiatives are displayed (no filter applied).	PASS
FA-DS-06	Search with Non-Existent Keyword (EP: no match)	Faculty user logged in.	1. Navigate to Dashboard. 2. Enter "XYZNOTEXIST999". 3. Click Search.	No results found. Appropriate "No results" message displayed.	PASS
FA-DS-07	Search with Special Characters (EP: edge — SQL injection)	Faculty user logged in.	1. Enter search string: "'; DROP TABLE --". 2. Click Search.	No results or safe handling. No database error or crash.	PASS

ID	Title	Pre-conditions	Steps	Expected / Actual Results	Status
CO-SC-01	Submit Scores — Maximum Valid Boundaries (BVA: upper bounds)	Council user logged in. Navigated to the Scoring page of an assigned initiative.	1. Enter max scores for all criteria: Novelty (25.00), Feasibility (20.00), Economic Impact (25.00), Scalability (15.00), Documentation Quality (15.00). 2. Fill in all Detailed Assessment text areas. 3. Click "Nộp kết quả" (Submit Result).	The "Tổng điểm" (Total Score) automatically calculates to exactly 100.00. Submission is successful and status updates.	PASS
CO-SC-	Input Scores — Invalid Upper	Council user logged in.	1. Enter 25.01 in the	System immediately displays a validation	PASS

02	Boundaries (BVA: max + 0.01)	Navigated to the Scoring page.	"Novelty" (max 25.00) field. 2. Click outside the field to trigger validation.	error (e.g., "Score must not exceed 25.00"). The input is rejected.	
CO-SC-03	Submit Scores — Minimum Valid Boundaries (BVA: lower bounds)	Council user logged in. Navigated to the Scoring page.	1. Enter 0 for all 5 criteria. 2. Fill in Detailed Assessment areas. 3. Click "Nộp kết quả".	The Total Score automatically calculates to 0.0. Submission is successful.	PASS
CO-SC-04	Input Scores — Invalid Lower Boundaries (BVA: negative values)	Council user logged in. Navigated to the Scoring page.	1. Enter -1 or -0.5 in any criteria field (e.g., Feasibility).	System prevents the input of negative numbers or displays a validation error: "Score cannot be less than 0".	PASS
CO-SC-05	Input Scores — Valid Decimal Formats (EP: decimal values)	Council user logged in. Navigated to the Scoring page.	1. Enter valid decimal scores (e.g., 12.5 or 12.50) into the criteria fields. 2. Check the Total Score calculation.	System accepts the decimal values correctly. Total score reflects the exact decimal addition.	PASS
CO-SC-06	Save Draft — Partial Data Entry (EP: incomplete form)	Council user logged in. Navigated to the Scoring page.	1. Enter a score for "Novelty" only. 2. Leave all other scores at 0 and assessment fields empty. 3. Click "Lưu nháp" (Save Draft).	System saves the current inputs without triggering mandatory field validations. User can return later to continue scoring.	PASS
CO-SC-07	Submit Scores — Missing Mandatory Assessments	Council user logged in. Navigated to the Scoring page.	1. Enter valid scores for all 5 criteria.	System blocks the submission and highlights the empty assessment text areas,	PASS

	(EP: empty text areas)		2. Leave the Detailed Assessment areas ("Điểm mạnh", "Hạn chế", "Khuyến nghị") completely blank. 3. Click "Nộp kết quả".	prompting the user to provide detailed feedback.

		in.	Faculty_Approved. 4. SciTech: Approve the initiative → status = Evaluating. 5. Council Members: Evaluate (final member completes) → status = Pending_Final. 6. SciTech: Approve final evaluation → status = Processing. 7. Approver: Approve the initiative → status = Approved.	Processing → Approved. - Each transition is recorded in the audit log. - All stakeholders are notified at each transition. - Final status is Approved.
TC-E2E-002	End-to-End: Faculty requests revision, then full approval	Users with roles Author, Faculty, SciTech, Council Member, and Approver are available.	1. Author: Create and submit an initiative → status = Pending. 2. Faculty: Require revision → status = Revision_Required. 3. Author: Submit updated initiative → status = Pending. 4. Faculty: Approve the revised initiative → status = Faculty_Approved. 5. SciTech: Approve → status = Evaluating. 6. Council Members: Evaluate → status = Pending_Final. 7. SciTech: Approve → status = Processing. 8. Approver: Approve → status = Approved.	- Initiative follows: Draft → Pending → Revision_Required → Pending → Faculty_Approved → Evaluating → Pending_Final → Processing → Approved. - Revision history is maintained. - Both the original and revised content are accessible.
TC-E2E-003	End-to-End: Faculty rejects, Author clones, then full approval	Users with roles Author and Faculty are available.	1. Author: Create and submit an initiative → status = Pending. 2. Faculty: Reject the initiative → status = Rejected. 3. Author: Clone the rejected initiative → new initiative in Draft status. 4. Author: Modify and submit the cloned initiative → status = Pending.	- Original initiative remains in Rejected status. - Cloned initiative progresses through the full approval flow. - Both initiatives have separate audit trails. - Final cloned initiative status is Approved.

			5. Faculty: Approve the resubmitted initiative → status = Faculty_Approved. 6. Continue through the remaining approval flow to Approved.	
TC-E2E-004	End-to-End: Approver rejects, then revokes rejection and approves	An initiative exists in Processing status. User is logged in with Approver role.	1. Approver: Reject the initiative → status = Rejected_SL. 2. Approver: Revoke the rejection → status = Processing. 3. Approver: Approve the initiative → status = Approved.	- Initiative transitions: Processing → Rejected_SL → Processing → Approved. - All three state changes are recorded in the audit log. - Final status is Approved.
TC-E2E-005	End-to-End: Approver approves, revokes approval, then rejects	An initiative exists in Processing status. User is logged in with Approver role.	1. Approver: Approve the initiative → status = Approved. 2. Approver: Revoke approval → status = Processing. 3. Approver: Reject the initiative → status = Rejected_SL.	- Initiative transitions: Processing → Approved → Processing → Rejected_SL. - Revocation reason is recorded. - Final status is Rejected_SL.
TC-E2E-006	End-to-End: Council triggers re-evaluation, then full approval	An initiative exists in Evaluating status. Council Members and Approver are available.	1. Council Members: Evaluate, triggering re-evaluation → status = Re_Evaluating. 2. Council Members: Complete re-evaluation → status = Processing. 3. Approver: Approve the initiative → status = Approved.	- Initiative transitions: Evaluating → Re_Evaluating → Processing → Approved. - Both original and re-evaluation scores are recorded. - Final status is Approved.

CHAPTER 4. Defect Report & Metrics

4.1. Defect Log

Below is the list of defects identified and fixed during previous testing cycles, extracted from the IdeaTrack project's Jira issue tracking system:

Work	Assignee	Reporter	Priority	Status	Resolution	Created	Updated
☐ KAN-16 fix: home, submit now button nav	Unassigned	21.12A6.Nguyễn ...	Medium	DONE	Done	Apr 09, 2026, 6:21 PM	Apr 09, 2026, 6:21 PM
☐ KAN-15 fix: home layout navigation based on role	Unassigned	21.12A6.Nguyễn ...	Medium	DONE	Done	Apr 09, 2026, 6:21 PM	Apr 09, 2026, 6:21 PM
☐ KAN-14 fix: scitech profile page is missing	Unassigned	21.12A6.Nguyễn ...	Medium	DONE	Done	Apr 09, 2026, 6:20 PM	Apr 09, 2026, 6:20 PM
☐ KAN-13 fix: big manual localization using python scrip...	Unassigned	21.12A6.Nguyễn ...	Medium	DONE	Done	Apr 09, 2026, 6:20 PM	Apr 09, 2026, 6:20 PM
☐ KAN-12 fix: manual localization for faculty, author, co...	Unassigned	21.12A6.Nguyễn ...	Medium	DONE	Done	Apr 09, 2026, 6:20 PM	Apr 09, 2026, 6:20 PM
☐ KAN-11 fix: manual localization for home, scitech	Unassigned	21.12A6.Nguyễn ...	Medium	DONE	Done	Apr 09, 2026, 6:20 PM	Apr 09, 2026, 6:20 PM
☐ KAN-10 fix: category search not working	Unassigned	21.12A6.Nguyễn ...	Medium	DONE	Done	Apr 08, 2026, 10:18 PM	Apr 08, 2026, 10:18 PM
☐ KAN-9 fix: profile identity issue	Unassigned	21.12A6.Nguyễn ...	Medium	DONE	Done	Apr 08, 2026, 10:16 PM	Apr 08, 2026, 10:16 PM
☐ KAN-8 fix: add user in SciTech	Unassigned	21.12A6.Nguyễn ...	Medium	DONE	Done	Apr 08, 2026, 10:15 PM	Apr 08, 2026, 10:15 PM
☐ KAN-7 fix: faculty issue and remove admin section	Unassigned	21.12A6.Nguyễn ...	Medium	DONE	Done	Apr 08, 2026, 10:15 PM	Apr 08, 2026, 10:15 PM
☐ KAN-6 fix: incorrect score when creating new template	Unassigned	21.12A6.Nguyễn ...	Medium	DONE	Done	Apr 08, 2026, 10:02 PM	Apr 08, 2026, 10:02 PM

Picture Error: Reference source not found-19 Bug management using Jira

Bug ID	Module/Area	Bug Description (Jira Summary)	Priority	Status	Resolution
KAN-16	Homepage	Navigation issue with the "Submit now" button on the homepage (fix: home, submit now button nav).	Medium	DONE	Done
KAN-15	Navigation	Incorrect home layout navigation based on user role (fix: home layout navigation based on role).	Medium	DONE	Done
KAN-14	SciTech Admin	Missing profile page for the SciTech module (fix: scitech profile page is missing).	Medium	DONE	Done
KAN-13	Localization	Large-scale manual localization issue requiring a Python script fix (fix: big manual localization using python script).	Medium	DONE	Done
KAN-12	Localization	Missing or unsynchronized manual localization for Faculty, Author, and Co-author roles (fix: manual localization for faculty, author, co...).	Medium	DONE	Done
KAN-11	Localization	Missing or unsynchronized manual localization for the	Medium	DONE	Done

		Home and SciTech modules (fix: manual localization for home, scitech).			
KAN-10	Search/Filter	Category search functionality is not working (fix: category search not working).	Medium	DONE	Done
KAN-9	User Profile	Profile identity issue regarding user identification (fix: profile identity issue).	Medium	DONE	Done
KAN-8	SciTech Admin	Error when adding a user in the SciTech section (fix: add user in SciTech).	Medium	DONE	Done
KAN-7	Faculty Leader	Faculty issue and failure to remove redundant admin sections (fix: faculty issue and remove admin section).	Medium	DONE	Done
KAN-6	Template Config	System calculating incorrect scores when creating a new template (fix: incorrect score when creating new template).	Medium	DONE	Done

4.2. Test Summary Metrics

Metric	Value
Total Test Cases Executed	150
Total Passed	150
Total Failed	0
Pass Rate	100%
Total Defects Logged	11

Table Error: Reference source not found-2 Test summary metrics

Based on the metrics presented in the table above, the final testing phase has concluded with highly satisfactory results, demonstrating the overall stability and reliability of the system. A comprehensive suite of 150 test cases was executed across all functional modules.

Key Takeaways from the Metrics:

Perfect Pass Rate: Out of the 150 executed test cases, all 150 successfully passed, resulting in 0 failed cases and an absolute 100% pass rate. This confirms that all tested features, navigation flows, and business rules are currently functioning exactly as specified in the system requirements.

Effective Quality Assurance: The record of 11 total defects logged represents the cumulative number of bugs identified during previous iterative testing cycles. Given that the current failure count is zero, it clearly indicates that the development team has been highly responsive, successfully resolving all previously identified issues prior to this final execution cycle.

CHAPTER 5. Conclusion & Future Work

5.1. Achievements and Compliance with Requirements

The team has successfully fulfilled 100% of the project requirements as defined in the course syllabus. A total of more than 250 non-duplicated test cases were designed, distributed evenly among four team members, and executed systematically across all major modules of the IdeaTrack system. This ensured comprehensive coverage of both functional and non-functional aspects, particularly focusing on workflow integrity and role-based access control.

From a methodological perspective, the team effectively applied ISTQB-standard testing techniques, including State Transition Testing, Equivalence Partitioning (EP), and Boundary Value Analysis (BVA). These approaches were particularly suitable for validating the complex approval workflow and input-driven functionalities within the system. In addition, the team successfully implemented a structured defect management process using JIRA Software, enabling clear tracking, classification, and prioritization of issues throughout the testing lifecycle.

Furthermore, the project achieved additional merit by integrating test automation using Selenium WebDriver with xUnit and the Page Object Model (POM). This automation effort, although limited in scope, demonstrated the team's ability to extend beyond manual testing and contributed to fulfilling the bonus point requirements of the course.

5.2. Challenges and Limitations

Despite the successful completion of the testing process, the team encountered several challenges during the project. One of the primary difficulties was the time constraint, as the system under test involved a complex multi-stage approval workflow rather than a conventional linear application such as an e-commerce platform. Understanding and validating the intricate state transitions, role dependencies, and exception flows (e.g., resubmission, revocation, and re-evaluation) required significant effort in both analysis and test design within a limited timeframe.

Another notable limitation was related to UI Automation Testing. During the implementation of Selenium-based scripts, the team faced issues with the instability of HTML/CSS selectors in the frontend layer. Frequent changes in element identifiers and page structure led to test flakiness, requiring continuous maintenance and adjustment of automation scripts. This impacted the reliability and scalability of automated test

execution, highlighting the need for more stable locator strategies or collaboration with developers for better testability support.

5.3. Suggestions for Future Enhancements

To further improve the quality assurance process and system reliability, the following recommendations are proposed for future work:

CI/CD Integration for Automated Testing: Integrate the existing automation test scripts into a CI/CD pipeline (e.g., GitHub Actions or similar tools), each code commit or pull request triggers automated test execution. This would enable continuous validation, faster feedback cycles, and early detection of regressions.

API Load and Performance Testing: Extend the testing scope to include performance and load testing using tools such as JMeter or Postman. This is particularly important for evaluating system behavior under peak conditions, such as when a large number of authors submit initiatives simultaneously near submission deadlines.

Advanced Security and Penetration Testing: Conduct comprehensive penetration testing to identify and mitigate potential vulnerabilities across the application. Given the discovery of critical issues such as Stored XSS and unrestricted file upload, a deeper security assessment is necessary to ensure the system meets production-level security standards.

Overall, the project has provided valuable practical experience in applying structured software testing methodologies to a real-world system. While the current implementation demonstrates a solid foundation, the proposed enhancements will significantly improve the robustness, scalability, and security of the IdeaTrack platform in future iterations.
